

Secure Online Backup

Case Study

The John Parkhouse Partnership (JPP) was established in December 1973 providing a wide range of Civil and Structural Engineering Consultancy services.

Working from purpose built premises in Walgrave, JPP Constructing Limited offer a wide range of Civil and Structural Engineering services. Their company, Soiltechnics also provide specialist geotechnical and environmental consultancy.

When a tape became stuck in their old machine, JPP contacted Datastore 365 to discuss a new way of protecting their information, through secure online backup. Following a free 30 day trial, JPP and Soiltechnics chose this solution as it works closely with the nature of their business.

Datastore 365 have provided JPP with the technology that will ensure that backups are completed well within the scheduled time-frame and all critical data can be restored within minutes if necessary. Data is automatically replicated to remote servers in the datacentres in Northampton and London thus removing the need for manual intervention. All information is encrypted to the highest level and can easily be restored should disaster strike.

Following this success, JPP are happy to recommend Datastore 365.

"For us it offers a peace of mind that we did not have with manual tape backup. Being able to retrieve drawings over the internet has saved us hours of work and reduces space on our server. I really can't fault it."

Mark French,
Director,
JPP
