

# case study vizion 7

When Arsenal FC announced their New Stadium project, it embraced far more than a move for the club from Highbury to a purpose built modern stadium. There were to be many benefits for the community, including new homes, new jobs, improved transport and usage of derelict sites. Wilson Connolly was chosen to develop, construct and promote the apartments.

**“The image created by acs was exactly what we wanted to achieve and take up on the apartments has been tremendous. Being able to deal with one company for everything was a huge bonus and helped us to meet our deadlines without fuss.”**

**Martin Letts,  
Head of Special Projects**

acs's Design Team produced space plans for the area and designs for futuristic bespoke desking, and coffee bar areas, as well as a special plinth for Vizion 7's impressive scale model of the apartment complex and the introduction of wireless technology to further enhance the facility. When the designs and costs had been agreed, acs's specialist divisions combined to supply and install data cabling, computer systems, telephone system, door entry security as well as a multimedia area with plasma screen and wireless headsets (allowing presentations to be viewed without distracting others). The furniture was manufactured to the agreed designs and installed within 4 weeks.

## industry and size

World wide development company.

## challenge

To create a sales and marketing centre within a short timescale.

## solution

The acs divisions worked closely together producing hand drawn visual concepts and met the deadline, creating an aesthetically pleasing sales and marketing centre.
